

Emergency Planning Policy

- 1 When an emergency or disaster in the community prevents our residential facilities from having access to a water service and the sheltering in place procedure is required, filling the toilet reservoir with water will not be an option. Staff will implement the Emergency Sewage and Waste Disposal Plan.
- 2 Staff will place a plastic trash bag in the toilet bowl to catch the waste:
 - 2.1 After each use, the trash bag will be sealed and placed in a bio-hazard container. The biohazard container is located in a specific location at each site.
 - 2.2 A new trash bag will be placed in the toilet bowl after each use.
- 3 The biohazard container contents will be properly disposed of, in compliance with Hazardous Waste regulations.
